

*recomLine* EBV IgG [Avidity] [IgA]  
*recomLine* CMV IgM

New Antigens  
 ZEBRA, BZLF1

Strip immunoassay with recombinant antigens for detection of IgG, IgA, and IgM antibodies to Epstein-Barr virus (EBV).

Epstein-Barr virus (EBV), an ubiquitously occurring Herpes virus, can cause symptoms of infectious mononucleosis on primary infection. As a result of lifelong persistence of this virus, reactivations can occur, especially in immunocompromised individuals.

*recomLine* EBV utilizes recombinant EBV antigens on nitrocellulose strips for detection of IgG, IgA, and IgM antibodies to multiple EBV antigens on one strip.

Product #4572 *recomLine* EBV IgG [Avidity]  
 [IgA] (20 tests per kit)

Product #4573 *recomLine* EBV IgM  
 (20 tests per kit)
